

**Solve all of your IT worries
with one phone call**

Every IT Need Taken Care of by True IT Experts

You have a business to run, but how often are you chasing after IT problems instead? Systems are down and work stalls. Worse, a hacker attacks your computer, ransomware locks the data, or a virus spreads like wildfire – and there is nothing you can do to stop it!

The computers, the lifeblood of your business, instead clot productivity and threaten precious data.

You need a company that turns IT gloom into a worry-proof system of devices that hum merrily along. And when problems arise, they are fixed in a snap – usually before you realize there was even an issue.

You need all-in-one IT provider to solve every problem, keep you on the leading edge of technology, and make your systems impervious to hackers and malware.

That answer is what is known as a Managed Service Provider (MSP), also called an IT solution provider. Companies like ours are experts in technology, and have staff to handle all your computer needs and fix problems as they arise. If you have an IT person or department, we can work alongside, or we can be your entire department – with one low monthly fee!

Hacker-Proof Your Business

Downtime is a business crusher. If customers cannot get in touch, they go somewhere else. The average cost of one minute of downtime is a staggering \$8,850, according to the Ponemon Institute. While your losses may be less, it is money you will never get back.

Prevent Downtime, Security Breaches, & Viruses

- **Lightning Fast Recovery from an Outage**

With our protections in place, outages are the rare exception, rather than the rule. In the uncommon event your system goes down, we will leap into action. Our experts fully control your impacted devices remotely, and have you up in running in minutes rather than hours or days – without data loss. Viruses are wiped clean, data locked up by ransomware recovered, and hackers repelled.

- **Up-to-Date Secure PCs and Servers**

Most hackers compromise systems that are not up to date. Software is constantly patched, or fixed by their vendors. If these patches are not installed quickly and properly, the systems running them are sitting ducks for viruses, malware, ransomware and breaches. Our company patches all your software promptly, completely, and without you needing to lift a finger.

- **Computer Monitoring Spots Issues Before they Become Problems**

Chances are no one is watching all of your computers looking for signs of trouble. Our technicians keep a careful and constant eye, monitoring each device for performance issues, hard drives near capacity, abnormal behavior, and signs of viruses or cyber-criminals.

*1 minute of downtime may cost you up to **\$8,850***

Experience All These Benefits

Knowing all your IT needs are covered opens up a host of possibilities.

- **Increased Uptime**

Up-to-date computers, device monitoring and lightning fast remediation lead to near constant uptime.

- **Safer Computing**

Our services watch for signs of trouble, and keep your computers safe from hackers with a rich layer of security.

- **Reduced Costs**

An in-house IT staff is expensive, with salary, benefits, office space and equipment. These costs weigh a business down. In addition, when an experienced staffer leaves, it is tough to replace them. Our services come with an affordable monthly rate and are an operating cost rather than CAPEX. Moreover, we are always staffed with the best IT experts in the business.

- **More Productivity and Efficiency**

Less downtime, well performing machines, modern hardware and software keep your office humming and workers at peak efficiency.

- **Leading Edge Technology**

Our team knows what technologies will make your business really shine, and keep you up to date with the latest and greatest.

- **IT Problems Go Away**

PCs and servers are complex and finicky. Problems are part of IT life. However, our expertise, combined with deep monitoring, security protection, and fast remote problems solving will have you saying goodbye to most glitches.

On average, 31 hours of productivity time are lost each week due to IT interruptions.
