ControlOne: Rethinking Connectivity & Security

We've reimagined what's required to regain control.

Delivering Managed Services

Today's workforce is everywhere, making it increasingly harder to enable connectivity while securing the business. Tool sprawl multiplies the effort to serve clients across the lifecycle and visibility is difficult — at the same time, compliance and troubleshooting requirements are growing.

ControlOne: A Unified Platform Shifting the Corporate Network to the Cloud

It's more critical than ever to protect the edge and ensure that all users are connected by the same level of security as the office. ControlOne is turning the network on its head with direct to cloud access.

Better Networking

Build a better network with a combination of Firewall + VPN + SD WAN.

- Software defined perimeter to create a single logical cloud-based network
- SD-WAN for bandwidth optimization
- Agent-based always-on VPN alternative for secure remote access

Better Security

Govern by policy and enforce security in real time. With ControlOne, you can customize your settings so every employee in the business follows the same security policy — no matter where they're located.

- Challenge everything security model to achieve Zero Trust
- Consistent security policy supported by Curated Smart Defaults
- Public WiFi protection for users and devices eliminating lateral attacks

Better Visibility

We're capturing data to allow you to troubleshoot and meet compliance requirements.
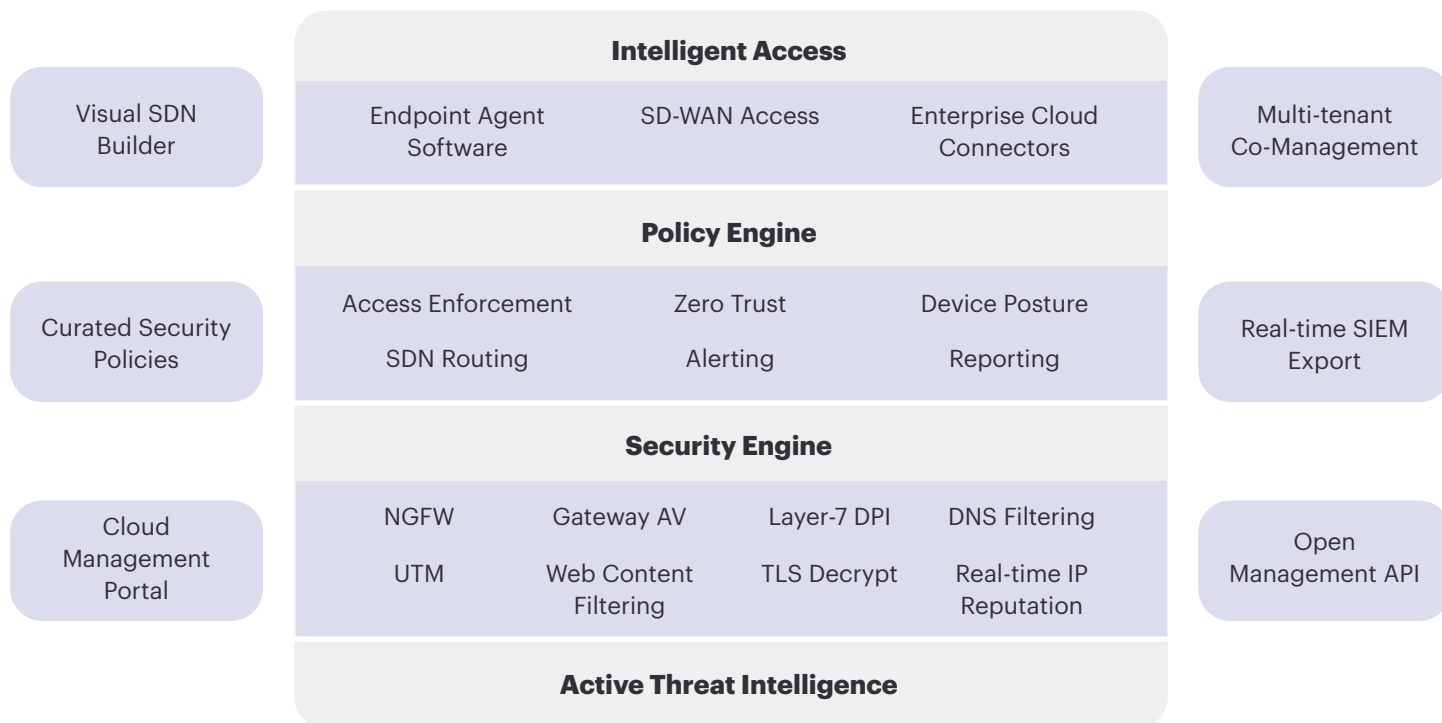

- Fully consolidated network activity logging for every user and device helps achieve compliance requirements
- Actionable intelligence accelerates troubleshooting and remediation

"As MSPs, we used to have an environment we could control, because it was all in one building. Now, it's everywhere — the edge has changed."

Wayne Hunter, CEO, AvTek Solutions

ControlOne: Rethinking Connectivity & Security

Intelligent Access		
Endpoint Agent Software	SD-WAN Access	Enterprise Cloud Connectors

Policy Engine		
Access Enforcement	Zero Trust	Device Posture
SDN Routing	Alerting	Reporting

Security Engine			
NGFW	Gateway AV	Layer-7 DPI	DNS Filtering
UTM	Web Content Filtering	TLS Decrypt	Real-time IP Reputation

Active Threat Intelligence

Visual SDN Builder

Curated Security Policies

Cloud Management Portal

Multi-tenant Co-Management

Real-time SIEM Export

Open Management API

ControlOne is a unified platform that includes both a hardware and software component.

The **hardware bridge** is ideal for locations:

- Protection of IoT & Unmanaged Devices
- WAN optimization
- Seamless per-packet failover
- Effortless Site-to-site routing

The **software agent** is ideal for endpoints:

- Deploy on all desktops and laptops you manage
- Always-on DNS + Web Security
- SaaS / Cloud optimization
- Public WiFi protection
- Device posture checking

> "We've seen the type of results and the impact on the reputation of the MSP when all of their clients are ransomed."
>
> *Bruce McCully*, CSO, Galactic Advisors

ControlOne Pillars

Software Defined Perimeter
Visually build, deploy and manage corporate networks, public cloud connectivity and SD-WAN without legacy edge appliances:

- One integrated network
- Eliminate bottlenecks
- Scale without limits
- Hardware without the hassle

Secure Remote Access
VPN alternative that delivers always-on connectivity and eliminates lateral attack vulnerabilities:

- Multi-layered security
- Increase performance
- Zero config & RMM deployment
- Prevent lateral attacks

Zero Trust Security
Minimize the attack surface with Zero Trust Network Access and Device Posture Check (DPC):

- Least-privileged access, less administrative pain
- Increased network visibility
- Block non-compliant devices
- Identity & context-based policies

Unified Threat Management
Comprehensive unified threat management including cloud firewall, Intrusion Prevention System (IPS), Data Loss Prevention (DLP) and web content filtering:

- UTM, NAT, DMZ, DNS, TLS, etc.
- Manage policies, not products
- Born in the cloud
- Protection in all ways — always

Actionable Intelligence
Enriched event attribution and intuitive reporting deliver unparalleled visibility across the entire network and security stack:

- Complete visibility
- One-click remediation
- Find everything
- Extended event management

Security Posture Management
Continuously enforce network security policies, prevent configuration drift, and ensure third party compliance:

- Jump start investigation
- Extended data retention & full audit history
- Drive standardization with configuration policies
- Granular management of administrative access

About Cytracom

Cytracom makes business connectivity and network security simple for MSPs across North America. With a reliable platform built on flexible, cloud-based technology, Cytracom delivers fully managed, enterprise-grade voice, network, and security solutions. The company is committed to a 100% channel-focused go-to-market model. As the move to the cloud continues, Cytracom enables partners to expand their portfolios and ultimately extend their reach and revenue with end-to-end managed services. Unparalleled tools, support, and training gives partners an advantage over the competition, reinforcing Cytracom's commitment to their success and confidence in its solution.
